SUMMARY

Product Manager with a proven 0 to 1 track record in B2B SaaS, from customer discovery and MVP scoping to launch and retention. Founded and shipped Repset, a live gym-management platform, signing 3 paying partners and sustaining 68% user retention at 60 days with zero marketing spend. Previously led product delivery for 10+ B2B clients across 6 countries as CEO of a 6-person software studio, cutting cycle time by 30% and lifting on-time delivery from 60% to 80%. Hands-on technical fluency in React, Node.js, and Flutter eliminates handoff friction and accelerates execution without replacing the PM role with engineering.

EXPERIENCE

Founder and Product Manager [Repset](#) *repset.org*

Apr 2026 – Present , Tunis, Tunisia

- **Product discovery and MVP scoping.** Identified an underserved gap in affordable, all-in-one gym management tooling through direct gym-partner interviews. Deliberately deprioritized analytics to scope an MVP around session booking, membership tracking, and coach scheduling, shipping 2+ weeks earlier as a direct result of that trade-off decision.
- **0 to 1 launch and B2B distribution.** Took the platform from first commit to live production in under 3 months. Acquired 3 paying gym partners through structured direct outreach, validating a repeatable B2B distribution motion in a new vertical with zero marketing spend.
- **Retention and product-market validation.** Grew to 50+ active users within 90 days of launch, sustaining 68% D60 user retention, a signal of genuine product-market fit validated through continuous gym-partner feedback loops.
- **Rapid iteration cadence.** Compressed the feedback-to-ship cycle to under 2 weeks per iteration by owning the full product loop: partner interviews, backlog prioritization, feature definition, and release. Technical ownership in React, Node.js, SQL, Firebase, and CI/CD on DigitalOcean eliminated handoff delays without substituting engineering judgment for product judgment.

CEO and Product Manager [Madinah Innovators](#)

Jun 2024 – Mar 2026 , Tunis, Tunisia

- **Delivery performance.** Led product delivery for 3 to 5 concurrent B2B projects, lifting on-time release rate from 60% to 80% by introducing sprint cadences, shared CI/CD pipelines, and a real-time risk-tracking dashboard, with no headcount increase.
- **Cycle time reduction.** Cut average kickoff-to-release cycle time from 10 to 7 weeks across web, mobile, and automation projects through structured sprint planning and retrospectives.
- **Stakeholder management and discovery.** Translated ambiguous client requirements into scoped, prioritized roadmaps for 10+ B2B accounts across Tunisia, UAE, Qatar, Netherlands, Germany, and France, running discovery from initial brief through final handover and client sign-off.
- **Process automation and client outcomes.** Identified recurring manual-process bottlenecks across client accounts and shipped Make/n8n automation workflows to close them, removing operational friction and creating upsell opportunities without expanding engineering headcount.
- **Team and studio leadership.** Built and managed a 6-person cross-functional team from the studio's founding, handling hiring, performance, and cross-project coordination across a portfolio of 10+ active B2B accounts.

Software Engineer Intern [ZEENOV](#)

Feb 2023 – Jul 2023 , Tunis, Tunisia

- **End-to-end product ownership.** Built and shipped Clevery, a cross-platform e-learning app for university and corporate training using Flutter and Firebase, owning core content delivery and authentication flows from spec to production.

- **Performance improvement.** Identified a content-loading bottleneck through profiling and refactoring, improving responsiveness on low-end devices, flagged and shipped within the same sprint.

SKILLS

Product: Product strategy, roadmap ownership, product discovery, user research, MVP definition, backlog prioritization, experimentation, product-market validation, product metrics, sprint planning, stakeholder management, B2B SaaS, GTM

Technical: React, Node.js, Laravel, Flutter, Firebase, SQL, CI/CD, DigitalOcean

Automation: Make (Integromat), n8n, workflow design and delivery

Tools: Jira, Trello, Clockify, GitHub, Microsoft 365

Languages: Arabic (native), French (advanced), English (advanced)

EDUCATION

Software Engineering [TEK-UP Private University](#) , 2022 – 2025

Applied Licence, Industrial Electricity [Higher Institute of Technologies of Gabes](#) , 2017 – 2021 (*Career pivot to software engineering, 2022*)
