

# Khrijj Mohamed Ahmed

## Product Manager, B2B SaaS, 0-to-1

Ariana, Tunis | [khrijjimohamedahmed@gmail.com](mailto:khrijjimohamedahmed@gmail.com) | +216-54-651-449 | [linkedin.com/in/KhrijjMohamedAhmed](https://www.linkedin.com/in/KhrijjMohamedAhmed) | [github.com/mohamedahmedkhrijj](https://github.com/mohamedahmedkhrijj) | [portfolio-nu-blond-70.vercel.app](https://portfolio-nu-blond-70.vercel.app)

---

### SUMMARY

---

Product Manager with hands-on 0-to-1 experience in B2B SaaS, from customer discovery and MVP scoping through launch and retention. Founder of Repset, a gym-management platform with 3 paying partners and 68% D60 retention among its first 50+ users. Previously led product delivery as CEO of a 6-person software studio, running cross-border discovery and roadmap planning for 10+ B2B accounts across 6 countries with distinct regulatory and compliance requirements, and sourced, hired, and managed the team that delivered them. Technically fluent in React, Node.js, and Flutter, enabling close collaboration with engineering without substituting for product judgment.

### EXPERIENCE

---

#### Founder and Product Manager | Repset ([repset.org](https://repset.org))

Apr 2026 – Present, Tunis, Tunisia

- **Product discovery and MVP scoping.** Identified an underserved gap in affordable, all-in-one gym management tooling through direct gym-partner interviews. Deliberately cut analytics from MVP scope to focus on session booking, membership tracking, and coach scheduling, a trade-off that shipped the product 2 weeks earlier than the original plan.
- **0-to-1 launch.** Took Repset from concept to live production in under 3 months. Closed 3 paying gym partners through direct outreach with zero marketing spend, validating a repeatable B2B distribution motion.
- **Early retention signal.** Reached 50+ active users within 90 days of launch, with 68% D60 retention among that initial cohort, an early but encouraging indicator of product-market fit, validated through ongoing gym-partner feedback loops.
- **Rapid iteration cadence.** Compressed the feedback-to-ship cycle to under 2 weeks by owning the full product loop: partner interviews, backlog prioritization, feature definition, and release. Technical ownership in React, Node.js, SQL, Firebase, and CI/CD on DigitalOcean removed handoff delays without overriding engineering judgment.

#### CEO and Product Manager | Madinah Innovators

Jun 2024 – Mar 2026, Tunis, Tunisia

- **Cross-border discovery and stakeholder management.** Ran end-to-end discovery, from initial brief through final handover, for 10+ B2B accounts across Tunisia, UAE, Qatar, the Netherlands, Germany, and France, translating conflicting requirements and compliance expectations across regions into scoped, prioritized roadmaps.
- **Delivery process redesign.** Diagnosed inconsistent on-time delivery across 3–5 concurrent B2B projects and introduced sprint cadences, shared CI/CD pipelines, and a real-time risk-tracking dashboard, improving release predictability without adding headcount.
- **Cycle time reduction.** Cut average kickoff-to-release cycle time from 10 to 7 weeks across web, mobile, and automation projects through structured sprint planning and retrospectives.
- **Process automation.** Identified recurring manual-process bottlenecks across client accounts and shipped Make/n8n automation workflows to close them, eliminating repetitive manual work without expanding engineering headcount.
- **Team and studio leadership.** Sourced, interviewed, and onboarded a 6-person cross-functional team from the studio's founding, 3 web/mobile developers, 1 DevOps engineer (AWS/cloud), 1 automation and workflow specialist, and 1 data analyst, then owned performance management and coordination across a portfolio of 10+ active B2B accounts.

#### Software Engineer Intern | ZEENOV

Feb 2023 – Jul 2023, Tunis, Tunisia

- **End-to-end product ownership.** Built and shipped Clevery, a cross-platform e-learning app for university and corporate training using Flutter and Firebase, owning core content delivery and authentication flows from spec to production.
- **Performance improvement.** Identified a content-loading bottleneck through profiling, then refactored and shipped a fix within the same sprint, improving responsiveness on low-end devices.

### SKILLS

---

**Product:** Product strategy, roadmap ownership, product discovery, user research, MVP definition, backlog prioritization, experimentation, product-market validation, product metrics, sprint planning, stakeholder management, B2B SaaS, GTM

**Technical:** React, Node.js, Laravel, Flutter, Firebase, SQL, CI/CD, DigitalOcean

**Automation:** Make (Integromat), n8n, workflow design and delivery

**Tools:** Jira, Trello, Clockify, GitHub, Microsoft 365

**Languages:** Arabic (native), French (advanced), English (advanced)

## **EDUCATION**

---

**Software Engineering**, TEK-UP Private University, 2022–2025

**Applied Licence, Industrial Electricity**, Higher Institute of Technologies of Gabes, 2017–2021
